

TEST OUTSOURCING

We put the pieces of the puzzle together by bringing a wealth of skills and software systems testing expertise to every project.

- Performance Test Evaluation
- Functional Test Automation
- Business Availability
- Test Outsourcing
- Mercury Sales & Training

In today's "right-sized" corporate environments, many organizations struggle to produce high-quality applications with a small or non-existent quality assurance (QA) department. **TechSouth Consulting** takes the trauma out of software systems testing, so you can focus on your core business.

We can help provide world-class products to your customers with our flexible **Software Test Outsourcing (STO)** service. You may have heard that off-shore testing offers a lower project investment, but its effectiveness is also much lower, actually increasing development costs. The **TechSouth** alternative is much better, leading to faultless performance of your products and systems while increasing your ROI.

TechSouth STO services are backed by in-depth expertise in the latest methodologies, tools, and techniques. We can help you assess or implement a structured test approach, automate your test process, and even train and coach your test professionals. Our services are delivered by highly skilled test professionals, selected and trained to work effectively as part of your team. **TechSouth STO** services include:

- **Manual Functional Testing** (test planning, test case development, execution and defect tracking/resolution).
- **Automated Functional Testing** (script development, test suite development, execution and defect resolution).
- **Performance Testing** (predictive modeling, planning, script development, test execution and defect resolution).
- **Engagement Management** (we assign an experienced **STO** engagement manager who manages all aspects of our team's stated goals and reports to your PM on a regular basis (our engagement managers average 15 years of software test experience).

From controlling a single test project, to assuming complete responsibility of your testing practice, **TechSouth STO** can provide either an in-house (in-sourcing) or off-site, turn-key test solution, tailored directly to your needs. Our engineers provide successful, on-time development and execution of your test

plans, giving you major advantages over QA staff augmentation:

- **Accelerated time-to-market** of new product releases – including off-hours and weekends.
- **Reduced ownership costs** through the elimination of HR and Facility capital expenditures.
- **Increased management efficiencies** through the delegation to our engagement managers.
- **Optimized business performance** of your products.
- **Competitive advantage gains** w/higher quality products.
- **Improved effectiveness**, efficiency, and reduced stress of in-house testing resources.

Our Test Lab: We maintain one of the most advanced testing labs in the world, with multi-OS capabilities that can replicate an entire network. Tests can be designed for any phase in the product life cycle to verify functionality, performance, and compatibility. When a product is deployed in the field, we can continue to test performance and reliability on an ongoing or event-driven basis.

TechSouth understands the special risks and challenges of outsourced test services, and has proven plans and techniques for meeting those challenges. Partnering with **TechSouth** affords the ability to utilize the best software quality professionals where you need them, when you need them - at a cost that is graduated for each step of the process.
